## **CLAIMS**:

## What is claimed is:

| 1 | 1.     | A method comprising:  |  |
|---|--------|---|--|
| 2 |        | removing material from a surface of a wafer by chemical mechanical        |  |
| 3 | polis  | polishing the wafer with a slurry comprising an oxidation agent for the   |  |
| 4 | mate   | material and a buffer; and  |  |
| 5 |        | monitoring the current required to rotate the wafer as a measure of       |  |
| 6 | the r  | the material removal endpoint.  |  |
| 1 | 2.     | The method of Claim 1, further comprising:                                |  |
| 2 |        | buffering with a weak organic acid/salt pair.                             |  |
| 1 | 3.     | The method of Claim 2, further comprising:                                |  |
| 2 |        | buffering with a weak organic acid/salt from the group consisting of      |  |
| 3 | citric | citric acid/potassium citrate, acetic acid/potassium acetate and ascorbic |  |
| 4 | acid,  | acid/potassium ascorbate.   |  |
| 1 | 4.     | A composition comprising:   |  |
| 2 |        | a slurry for chemical mechanical polishing a metal material;              |  |
| 3 |        | an oxidizing agent for the metal material;                                |  |
| 4 |        | an abrasive; and  |  |
| 5 |        | a buffer;   |  |
| 6 |        | wherein the composition is suitable for use in a chemical mechanical      |  |
| 7 | polis  | sh process.   |  |
| 1 | 5      | The composition of Claim 4 wherein the oxidizing agent is hydrogen        |  |

- The composition of Claim 4, wherein the oxidizing agent is hydrogen
  peroxide.
- The composition of Claim 4, wherein the buffer is a weak organic
  acid/salt pair.

2

3

- 7. The composition of Claim 6, wherein the weak organic acid
- comprises one of the group consisting of citric acid/potassium citrate, acetic
- acid/potassium acetate and ascorbic acid/potassium ascorbate.
- 1 8. The composition of Claim 4, wherein the metal film comprises one
- of the group consisting of tungsten and titanium nitride.
- 1 9. The composition of Claim 4, wherein the oxide film comprises
- 2 silicon dioxide.
- 1 10. The composition of Claim 4, wherein the abrasive comprises one of
- 2 the group consisting of silica and alumina.
- 1 11. The composition of Claim 4, wherein the endpoint signal of the
- 2 buffered slurry is enhanced over the endpoint signal of the unbuffered
- 3 slurry by at least a factor of two.
- 1 12. A kit comprising:
  - a slurry for chemical mechanical polishing a metal material;
  - an oxidizing agent for the metal material;
    - an abrasive; and
- 5 a buffer.
- 1 13. The kit of Claim 12, wherein the metal comprises one of the group
- 2 consisting of tungsten and tantalum nitride.
- 1 14. The kit of Claim 12, wherein the abrasive comprises one of the group
- 2 consisting of silica or alumina.
- 1 15. The kit of Claim 12, wherein the buffer is an organic acid/salt pair.
- 1 16. The kit of Claim 15, wherein the organic acid comprises one of the
- group consisting of citric acid/potassium citrate, acetic acid/potassium
- acetate and ascorbic acid/potassium ascorbate.

- 1 17. The kit of Claim 12, wherein the endpoint signal of the buffered
- 2 slurry is enhanced over the endpoint signal of the unbuffered slurry by at
- 3 least a factor of two.
